

FRIDAY EVENING, JAN. 22, 1858.

ring the exhibition yesterday, called forth expressions of admiration from the large number of telegraph men and merchants who visited it. Among the other messages received from the Philadelphia operator was one stating that the telegraph office at that city was crowded with curious citizens, one of whom for the past two years had denounced the "improvement" as humbug, but who now acknowledged it to be everything that its friends claim for it. The battery cells only are used to supply the electricity at each end of the wire, while from fifteen to thirty are necessary to work the Hulse and Morse instruments. The Hughes instrument is unquestionably the most perfect telegraphic apparatus that has yet been invented, and in its practical work justifies all that its inventor claimed for it at the outset.—N. Y. Courier.

Ventilation would be greatly promoted, if, in place of one of the upper lights of glass in every bed-room window, there was inserted a sheet of tin cut in strips, the lower edge set out like the flats of Venetian blinds, so as to break the direct force of the wind and to prevent rain from blowing in.

DIED,
In New Orleans, on Thursday, the 14th inst., at 4 o'clock
P. M., KATE KENNEDY BLACK, aged 3 years 6 months and
12 days, daughter of Isabel G. and Geo. P. Black.
